The combinant mammalian cells expressing alpha-melanocyte panel of recombinant mammalian cells expressing alpha-melanocyte stimulating hormone, Acri Mc-3, Mc-4 and Mc-5 receptors

Example 2C; Fig 3A-B; 121pp; English.

This is the amino acid sequence of the human adrenocorticotropic stimulating hormone receptor (melanocyte stimulating hormone-2 receptor (MCR2). The MCR agonists and antagonists can be used for modifying feeding hormone in animal. The argonists can be used for modifying feeding while the agonists can be used for inhibiting cas anorexia and obesity, and other pathological weight and eating-related disorders. They can also be used to treat failure to thrive disorders and disease-related cachexia, such as occurs in sequence 297 Ak;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The reappoint of the control of the

11 Stample; Fig 1; 90pp; English.

12 The present sequence, a human thyroid stimulating hormone (TSH)

18 alpha-subunit mutant, was used in a novel method

19 for the preparation of a human glycoprotein hormone (GPH),

19 comprising a basic anino acid in the alpha-subunit at positions 11,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The method can be used to obtain GPH having super-agonist or antagonist activity. The GPH agonists can be used to treat, e.g. Grave's disease, thyroid cancer, ovulatory disfunction, luteal phase defect, unexplained infertility, male factor infertility and time-limited conception. They can also be used in the super-ovulation of bovine animals. The modified GPH can also be used to target delivery of therapeutic agents to thyroid or gonadal tissue, or in the treatment of certain neoplasms. The modified GPH can have an activity which is increased by at least 3-fold compared
                                                                                                 14-MAY-1998 (first entry)

Addressin cell adhesion molecules - used to develop products for detection of inflammatory conditions or cancer and for treating or preventing inflammatory conditions

Claim 16; Page 102-104; 164pp; English.

This polypeptide comprises human mucosal vascular addressin cell adhesion molecule MAGCAM-1(a), a novel cell surface adhesion molecule that shows homology to murine MAGCAM-1. The invention molecule that shows homology to murine MAGCAM-1. The invention class to human MAGCAM-1(a) as well as 4 splice variants, designated MAGCAM-1(b), -1(c), -1(d) and -1(e) (see W60607-11). Their amino acid sequences were deduced from cDNA clones (see V38201-05) isolated from a human foetal brain cell cDNA library. The invention also provides vectors, host cells, recombinant methods of producing the polypeptides, as well as methods for identifying agonists and antagonists of activity, diagnostic methods for detecting cancer or a pathological inflammatory condition, and therapeutic methods for treating an individual in need of a reduction in activity of any of MAGCAM-1(a-e). Genomic CONA molecules comprising the 5' untranslated region and exons 1-5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (see V38223-28) which, in various combinations, comprise the coding region of any of the MAGCAM-1 splice variants are also claimed. The novel human MAGCAM-1 polypeptides can be used as a target for the diagnosis and treatment of inflammation conditions such as transplant rejection, arthritis, rheumatoid arthritis, infection, dermatosis, inflammatory bowel disease, and autoimmune disease, including chronic relapsing experimental autoimmune encephalitis.

Single chain gonadotropins having a chorionic gonadotropin (GG) beta-subunit at the N-terminus and a GG alpha-subunit at the C-terminus (or vice versa), joined by a linker of 1-16 amino acids are claimed. Ten specific analogues were synthesised, each of which was expected to contain 4 Asn-linked oligosaccharides. Removal of

                                                                                                                                                                     Sequence 12, Application US/09016366A

Patent No. 5955431

GENERAL INFORMATION:
APPLICANT: Stevens, Richard L.
APPLICANT: Huang, Chifu
TITLE OF INVENTION: MAST CELL PROTEASE PEPTIDE
TITLE OF INVENTION: INHIBITORS
NUMBER OF SEQUENCES: 65
CORRESPONDENCE ADDRESS:

Patent No. 6001410

GENERAL INFORMATION:
APPLICANT: BOOLEN, Paul L

APPLICANT: ROSsiakoff, Nicholas
APPLICANT: Hawn, Regina
APPLICANT: Hawn, Regina
APPLICANT: AFORT LIQUER BEVERAGE CONTAINING RECOMBINANT MONELLIN
TITLE OF INVENTION: A FRUIT LIQUER BEVERAGE CONTAINING RECOMBINANT MONELLIN
TITLE OF INVENTION: A fruit liqueur beverage...SCM...enhan
CURRENT APPLICATION NUMBER: US/08/813,884C

CURRENT APPLICATION NUMBER: 60/022,597

EARLIER PILING DATE: 1997-03-06

EARLIER PILING DATE: 1996-07-25

NUMBER OF SEQ ID NOS: 54

SSQ ID NO 42

LENGTH: 80

Patent No. 593931

GENERAL INFORMATION:
APPLICANT: Greenspan, Daniel S
APPLICANT: Takahara, Kazuhiko
APPLICANT: Hoffman, Guy G
ITLE OF INVENTION:
NUMBER OF SEQUENCES: 13
CORRESPENDENCE ADDRESS:
ADDRESSE: Quarles & Brady
STREET: 1 South Pinckney Street
CITY: Madison
STATE: W1
COUNTRY: US
COMPUTER: READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATENTION DATA:
APPLICATION NUMBER: US/08/866,650
               TITLE OF INVENTION: Vertebrate Smoothened Proteins NUMBER OF SEQUENCES: 5
CORRESPONDENCE ADDRESS:
ADDRESSE: Genertech, Inc.
STREET: 1 DNA Way
CITY: South San Francisco
STATE: California
                                                                                                                                                                                  ZIP: 94080

COMPUTER READABLE FORM:

COMPUTER: IBW PC. COMPALIDLE

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: WinPatin (Genentech)

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/720,484A

FILING DATE: 30-Sep-1996

CLASSIFTCATION: 530

ATTORNEY/AGENT INFORMATION:

NAME: SVODOda, Craig G.

REGISTRANION NUMBER: P1050

TELEPHONE: 650/225-1489

TELEPHONE: 650/225-1489

TELEPHONE: 650/225-1489

TELEPHONE: 650/225-1489

TELEPHONE: SEO ID NO: 4:

Sequence 13, Application US/07857224B
Patent No. 5958784
GENERAL INFORMATION:
APPLICANT: Benner, Steven A.
TITLE OF INVENTION: Predicting Folded Structures of Proteins NUMBER OF SEQUENCES: 114
CORRESPONDENCE ADDRESS:
ADDRESSEE: Steven A. Benner
STREET: Hadlaubstrasse 151
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               STATE: none

A; Title: The complete amino acid sequences of alpha subunits of chum salmon gonadotropin A; Reference number: A60627; MUID:90236233
A; Accession: A60627
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              bet
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A; Molecule type: protein
A; Residues: 14-108 < ITO>
C; Comment: Active form of pituitary glycoprotein hormone is heterodimer of alpha and
C; Superfamily: glycoprotein hormones alpha chain
C; Keywords: glycoprotein; heterodimer
F;1-13/Domain: signal sequence (fragment) #status predicted <SIG>
F;14-108/Product: glycoprotein hormones alpha-1 chain #status experimental <MAT>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A. Molecule type: protein
A. Residues: 1-16, °C' 18-20, °S'. 22-432;447-463;1367-1517;1567-1673;2062-2176, °N', 2178-226
C. Comment: Cys-1201 and Cys-2015 have free sulfhydry groups
C. Comment: The plasma fibronectin molecule consists of two chains, which are connected to C. Comment: The plasma fibronectin surfaces and various compounds including collagen, filt aling, and maintenance of cell surfaces and various compounds including collagen, filt aling, ilbronectins bind cells where it prepart homology; fibronectin type is repeat homology (IF1)
C. Comment: Plasma fibronectin is synthesized by hepatocytes.
C. Schere family: fibronectin is synthesized by hepatocytes.
C. Schere family: fibronectin type is repeat homology (IF2)
F. 11-54/Domain: fibronectin type is repeat homology (IF3)
F. 11-55/Domain: fibronectin type is repeat homology (FN3)
F. 11-55-104/Domain: fibronectin type is repeat homol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Libronectin - Dovine Cattle)

S63536
aminomethyltransferase (EC 2.1.2.10) gdcsPB precursor - Flaveria pringlei
N;Alternate names: glycine cleavage system protein PB
C;Species: Flaveria pringlei
C;Date: 13-Dec-1996 #sequence_revision 13-Mar-1997 #text_change 22-Jun-1999
C;Accession: S63536
